

Hip and Knee Orthopedic Surgical Robots -- Markets Reach \$4.6 Billion By 2022

LEXINGTON, Massachusetts (January 20, 2016) – WinterGreen Research announces that it has published a new study *Hip and Knee Orthopedic Surgical Robots: Market Shares, Strategy, and Forecasts, Worldwide, 2016 to 2022*. The 2016 study has 145 pages, 64 tables and figures. Worldwide Hip and Knee Orthopedic surgical robot markets are poised to achieve significant growth. The accuracy provided by the robot is not reproducible by the human surgeon, so ultimately all surgeons will want to perform the orthopedic implants using this technology.

Knee and hip surgical robots provide consistent reproducible precision. This capability is so significant for implant surgery that the robots are positioned to become the defacto standard of care for knee and hip surgery within five years. Any one getting a knee or hip replaced will demand attention to quality of life, to maintenance of lifestyle provided by a robot when they have a joint replacement.

As next generation systems, hip and knee robotic units provide a way to improve traditional orthopedic hip and knee replacement surgery. Total hip replacement surgery has evolved dramatically as advances in technology have brought improved surgical techniques. Surgical robots are a significant part of that advance.

Once, the penetration achieves this 35% level, all orthopedic surgeons will demand that hospitals offer robotic orthopedic surgical capability because the outcomes are more predictable and better. If the hospital does not offer the robot, the surgeon will move to a more modern facility.

Knee and Hip Surgical Robots have been impacted by the reduction in insurance payments. Payment reductions have forced hospitals to start acting as businesses. The cost of delivering care has become as much a factor as providing quality care when making decisions about patient improvement in condition. Cost-cutting has been made in the supply chain. Suppliers were examined closely for quality and cost.

The number of suppliers is reduced to put pressure on the ones that remain. Those remaining are pressured to improve prices and efficiencies. Hospitals, physicians, and care providers have been financially incentivized to create accountable care organizations (ACOs). Coordinated patient care plans and value-based purchasing were rewarded. The med device buyer shifted from physicians to the ACOs and smart buying groups.

Stryker has thrived in this cost efficient environment with a surgical robot that permits faster surgeries, more cost efficient surgeries. In addition, Stryker offers an integrated system. The ability to include a Mako total knee application with Stryker Triathlon total knee system is anticipated to increase market share for Stryker. Stryker market leading Triathlon total knee system is helped in the market by the robot simply by the improved surgical technique possible. Surgical robots are proving themselves in a variety of disciplines, lending credibility to the Stryker robotic initiative.

According to Susan Eustis, lead author of the study, "Use of the robot with the orthopedic implant represents a key milestone in reconstructive surgery. Robots provide an opportunity to transform orthopedics. By furthering the growth of robotic-arm assisted surgery, patients can get better treatment. By enhancing the surgeon and patient experience is is likely that the entire orthopedics implant market will grow more rapidly than it would otherwise."

Stryker uses the Mako to perform partial knee resurfacing and is happy to add robotic capability to total knee resurfacing. Technology is enhancing a wide variety of procedures in many surgical specialties.

The aging US population has supported demand, since the occurrence of health issues that require medical devices is higher in the elderly population. Buoyed by strong demand and sales, industry profit margins have increased considerably during the past five years.

Hospitals are adopting robotic surgical devices to improve their outcomes numbers. Hospitals are measured on outcomes, robots for surgery, when used by a trained physician are improving outcomes significantly. Hundreds of universities worldwide have research programs in robotics and many are awarding degrees in robotics. These “roboticists” are increasingly being hired by Global 2000 organizations to link mobile robots (mobile computers) into existing IT systems.

Robot-assisted surgery gives the surgeon better control over the surgical instruments and a better view of the surgical site.

Hip and knee orthopedic surgical robot device markets at \$84 million in 2015 are anticipated to reach \$4.6 billion by 2022 as next generation robotic devices, systems, and instruments are introduced to manage surgery.

The complete report provides a comprehensive analysis including procedure numbers, units sold, market value, forecasts, as well as a detailed competitive market shares and analysis of major players’ success, challenges, and strategies in each segment and sub-segment. The reports cover markets for knee and hip robotic orthopedic surgery medical specialties and sub-specialties.

WinterGreen Research is an independent research organization funded by the sale of market research studies all over the world and by the implementation of ROI models that are used to calculate the total cost of ownership of equipment, services, and software. The company has 35 distributors worldwide, including Global Information Info Shop, Market Research.com, Research and Markets, Bloomberg, and Thompson Financial. It conducts its business with integrity.

WinterGreen Research is an independent research organization funded by the sale of market research studies all over the world and by the implementation of ROI models that are used to calculate the total cost of ownership of equipment, services, and software. The company has 35 distributors worldwide, including Global Information Info Shop, Market Research.com, Research and Markets, and Thompson Financial. WinterGreen Research is positioned to help customers facing challenges that define the modern enterprises. The increasingly global nature of science, technology and engineering is a reflection of the implementation of the globally integrated enterprise. Customers trust wintergreen research to work alongside them to ensure the success of the participation in a particular market segment.

WinterGreen Research supports various market segment programs; provides trusted technical services to the marketing departments. It carries out accurate market share and forecast analysis services for a range of commercial and government customers globally. These are all vital market research support solutions requiring trust and integrity.
