REPORT METHODOLOGY

This is the Forty Second report in a series of market research reports that provide forecasts in communications, telecommunications, the internet, computer, software, and telephone equipment. The project leaders take direct responsibility for writing and preparing each report. They have significant experience preparing industry studies. Forecasts are based on primary research and proprietary data bases. Forecasts reflect analysis of the market trends in the segment and related segments. Unit and dollar shipments are analyzed through consideration of dollar volume of each market participation in the segment. market share analysis includes conversations with marketing directors, distributors, leading market participants, and companies seeking to develop measurable market share. Over 200 in depth interviews are conducted for each
